

Workshop Registration page

Figure 1: Dashboard

The main interface displays the workshop registration form on the left, allowing users to enter their full name, email address, and select a workshop. The right panel shows the registered participants list, which updates dynamically upon successful registration.

The screenshot shows a web application titled "Workshop Registration" with a dark theme. The interface is split into two main sections. On the left, the "Register for a Workshop" form is displayed, featuring input fields for "Full Name" (containing "Buvanesh s"), "Email Address" (containing "buvaneshbca24aascc@gmail.com"), and a dropdown menu for "Workshop" (selected "Full Stack Java Development"). A red "Register" button is at the bottom of the form. On the right, the "Registered Participants" section shows a message: "No one has registered yet. New registrations will appear here." The top of the page includes a navigation bar with a user profile icon, the title "Workshop Registration", a "Sign out & Manage My Account" link, and a "Registered" count of 0. The footer contains the text "Workshop Registration System © 2022 - Data stored locally in your browser."

Figure 2: Registration Successful Message

Upon successful form submission, a confirmation popup is displayed showing the registered participant's name, email address, and selected workshop, confirming that the registration has been recorded successfully.

Figure 3: Duplicate Email Validation

The application prevents duplicate registrations by detecting previously used email addresses. An inline error message and a toast notification are displayed to alert the user that the entered email is already registered.

Figure 4: Form Validation

Client-side validation is enforced upon form submission. Required fields such as Full Name and Email Address are highlighted with a red border and inline error messages when left empty, ensuring data completeness before registration.

The screenshot shows a web application titled "Workshop Registration" with a sub-header "Sign up to manage all sessions". On the right, a badge indicates "1 Registered". The main content is divided into two panels. The left panel, "Register for a Workshop", includes a sub-header "Fill in your details to secure your spot." and three input fields: "Full Name" (containing "John Doe"), "Email Address" (containing "john@doe.com"), and "Workshop" (a dropdown menu with "Full Stack Java Development" selected). The "Full Name" and "Email Address" fields have red borders and red error messages below them: "Name is required" and "Email is required". A blue "Register" button is at the bottom. The right panel, "Registered Participants", has a "Clear All" button and a list of participants. One participant is listed: "Buvanesh S." with email "buvanesh.s@doe.com" and registration time "Full Stack Java Development: Jan 18, 04:11 PM".

Figure 5: Participant List

All registered participants are displayed in the right panel with their name, email address, selected workshop, and registration timestamp. Each entry includes a remove option, and a Clear All button is available to reset the list.

This screenshot is identical to the one in Figure 4, showing the "Workshop Registration" form with validation errors and the "Registered Participants" list. The participant list in the right panel shows "Buvanesh S." with email "buvanesh.s@doe.com" and registration time "Full Stack Java Development: Jan 18, 04:11 PM". At the bottom of the page, a footer reads "Workshop Registration System © 2025 | Data stored locally in your browser".

Figure 6: Local Storage

Participant data is persisted using the browser's local storage, ensuring that all registered entries are retained across page refreshes without the need for a backend database.

The screenshot displays a web application titled "Workshop Registration" with a subtitle "Sign up & manage attendees". The interface is divided into two main sections: a registration form on the left and a list of registered participants on the right.
